

If art is man's interpretation of nature,  
then why not ask for the original?

Granite Countertops:  
#1 in Cleanability!

Reduction in Bacteria after  
washing and rinsing:

Granite:	36,000 to 1
Stainless Steel:	4,000 to 1
Concrete:	2,400 to 1
Tile:	900 to 1
Wood:	500 to 1
Plastic Laminate:	285 to 1

Six countertop surfaces were contaminated with E. coli bacteria, then washed and rinsed using dish soap and "normal and reasonable" cleaning practices. Granite countertops provided the greatest reduction in bacteria counts of all materials tested!\*

\*Source: "The Reduction of E. Coli on Various Countertop Surfaces," Dr. O. Peter Snyder, Jr., PhD of the Hospitality Institute of Technology and Management, March 1999.
